

ALTEA GREEN POWER AND CONSORZIO FORESTALE ALTA VALLE SUSA JOIN FORCES TO REFOREST THE SUSVA VALLEY AREA

A reforestation project to develop the local ecosystem, reaffirming the company's commitment to the environment and the enhancement of local areas

Rivoli (Turin), 30 September 2025 - **Altea Green Power (hereinafter "AGP" or "the Company")**, a company active in the development of "green energy" projects and the construction of "green energy" plants, and *Consorzio Forestale Alta Valle Susa* (CFAVS) have signed a sponsorship agreement in which AGP supports the CFAVS reforestation project.

An initiative launched with the aim of making a tangible contribution to the regeneration of local ecosystems, which in recent years have been severely impacted by fires, landslides, and other extreme events linked to climate change. The project forms part of AGP's broader ESG plan which, in addition to developing projects at the core of its business - namely the installation of renewable energy plants - also seeks to implement tangible actions in support of environmental protection and the welfare of local communities.

The project calls for the planting of **16,000 trees** across a total area of **6.97 hectares**, distributed in **five areas** selected on the basis of environmental, climatic, and logistical criteria. The interventions will be carried out in phases, with multi-year planning designed to guarantee the effectiveness and sustainability of restoration, with completion expected by 2029.

The first works began in September 2025 in the areas of **Cotolivier** and **Salesiani**, in the municipality of Oulx. Most project activities in Cotolivier will be completed by 2026, while the Salesiani area - also conceived as a site for environmental education and experimentation - will be finalized by 2029. A key aspect is the choice to make it accessible to people with disabilities, broadening the inclusivity of the project.

In the words of Giovanni Di Pascale, CEO of Altea Green Power: *"We are proud to support Consorzio Forestale Alta Valle Susa in a project of strong environmental and social significance. Investing in reforestation means making a tangible contribution to mitigating climate change, safeguarding biodiversity, and restoring vital ecosystems, while also returning accessible and safe green spaces to communities, rich in cultural, scenic, and recreational value. This initiative marks a concrete step in our sustainability path and reaffirms Altea Green Power's commitment to enhancing the local area and supporting its communities. As a company active in the development of photovoltaic and wind power plants, we see supporting environmental protection projects as a logical extension of our mission. The project will also be incorporated into our sustainability reports and included among the planned actions to achieve our ESG goals".*

Federico Morra di Cella, CFAVS Director: *"As a Forestry Consortium, we are pleased that this project has found a way to be realized. These reforestation initiatives enable us to more effectively meet the social, economic, and protective needs of the local area and landscape where we operate, ensuring the ecosystem services that the forest can deliver, with particular focus on citizens' activities in the natural environment that defines the Upper Susa Valley, through the creation of multi-species stands and the restoration of protective forests".*

In addition to planting, the project includes a structured **five-year maintenance phase of the areas**, entrusted to the Forestry Consortium. In parallel, activities will be carried out on **environmental monitoring, measurement of CO₂ absorption**, assessment of biodiversity benefits, and **educational and awareness-raising initiatives** aimed at local citizens and students.

Informative panels will be installed in each area involved, illustrating the project and highlighting the company's tangible commitment to environmental protection.

About Altea Green Power

Altea Green Power is a company listed on the Italian Stock Exchange - STAR segment -, founded in 2008 in Rivoli with the aim of supplying and managing renewable energy plants - photovoltaic, wind, and storage - that ensure maximum efficiency and operational reliability, all while fully respecting the environment. Altea Green Power is also an Independent Power Producer (IPP) focused exclusively on renewable sources and a supplier of EPC (Engineering, Procurement, and Construction) services, positioning itself as the primary point of reference for the construction and start-up of renewable plants. In a market where energy transition is central and medium to large-sized companies are increasingly taking the lead, Altea Green Power aims to be a key partner in the field of energy efficiency, helping its clients identify the best solutions to reduce energy consumption and mitigate the resulting impacts on global climate change.
